The textbook Ophthalmology is intended to provide medical students, interns, ophthalmology residents, as well as primary care physicians with a general approach to eye exam and treatment of the most common ocular diseases and emergencies.

In connection with the health care reform in Ukraine that includes, inter alia, the adaptation of achievements of modern European and American ophthalmology in Ukrainian practical medicine, the authors included data on the latest world achievements and guidelines for ophthalmic diseases treatment.

The book contains the latest information on the eye anatomy, thorough ophthalmic examination, concepts of diagnosis, and recent advances in the treatment of the most common ocular disorders and emergencies. Most chapters are illustrated with color clinical photographs or illustrations. At the end of each chapter, key points, schemes, control questions, multiple choice tests, and clinical cases are given to help students prepare for practical lessons and future exams. The appendix provides ophthalmic pharmaceuticals sorted by classes.
